

An underwater photograph of a coral reef. In the upper right, a diver is visible, partially obscured by the water's murkiness. The reef is composed of various coral species, including a prominent branching coral in the center. The lighting is dim, creating a moody atmosphere. The text is overlaid on the bottom portion of the image.

Heritage Awareness Diving Seminars (HADS)

for Dive Professionals

The Heritage Awareness Diving Seminar (HADS) provides SCUBA training agency Course Directors, Instructor Trainers, and Instructors with information and skills to proactively protect shipwrecks, artificial reefs, and other underwater cultural sites as part of the marine environment. HADS consists of two evenings of classroom instruction and one day of open water diving; participants receive the HADS workbook and a CD with all PowerPoint presentations to use in their own classes.

Upon completion, participants will be prepared to teach the new Heritage Awareness Diving Specialty through NAUI, PADI, and SSI! For more information, visit: fpan.us/HADS

Submerged Sites Education and Archaeological Stewardship (SSEAS)

for All Divers

This program is intended to train sport divers in the methods of non-disturbance archaeological recording and then give these trained divers a mission. SSEAS divers are trained to recognize historic shipwrecks and cultural sites, to record the site using photography and hand-drawn site plans, and to fill out Florida Master Site File recording forms. The SSEAS program consists of an Orientation to Underwater Archaeology for Sport Divers training course with classroom, confined water, and open water instruction.

Upon completion, participants will receive an FPAN Certificate of Training; a NAUI or PADI Specialty Certification may be possible as well. For more information, visit:
